

# Automation in Everyday Life

## Hypothesis

Automation is an undeniable truth in our universe. Humans inherently cannot work at 100% efficiency and 100% accuracy. Machines, on the other hand, can achieve both at the same time.

This paper will be theoretical and will contain polarizing arguments from both factions. This hypothesis aims to summarize arguments and counter-arguments for an informed conclusion.

The measure will on lives lost before and after automation, median family income before and after automation among others

$H_0$  : Automation will be here to stay

$H_A$ : Automation will not further anymore
